

# **Dose Response and Concentration Response Analysis of Drug Effects**

**Juan J. L. Lertora. M.D., Ph.D.**  
**NIH Clinical Center**  
**January 27, 2011**

## **DOSE-EFFECT RELATIONSHIP**

**The intensity and duration of a drug's effects are a function of the drug dose and drug concentration at the effect site**

**(The contribution of Frank M. Balis, M.D. is gratefully acknowledged)**

## Monitoring Dose-Effect

- Level
  - Molecular (e.g, enzyme inhibition)
  - Cellular (*in vitro* tissue culture, blood cells)
  - Tissue or organ (*in vitro* or *in vivo*)
  - Organism
- Endpoint used to measure effect may be different at each level
- Overall effect = sum of multiple drug effects and physiological response to drug effects

## Endpoints to Monitor Drug Effect

### Farnesyltransferase Inhibitors for Cancer

LEVEL	ENDPOINT
Molecular	Farnesyltransferase inhibition
Cellular	Proliferation rate, apoptosis
Tumor	Response (change in tumor size)
Organism	Survival, quality of life

## Dose-Effect Endpoints

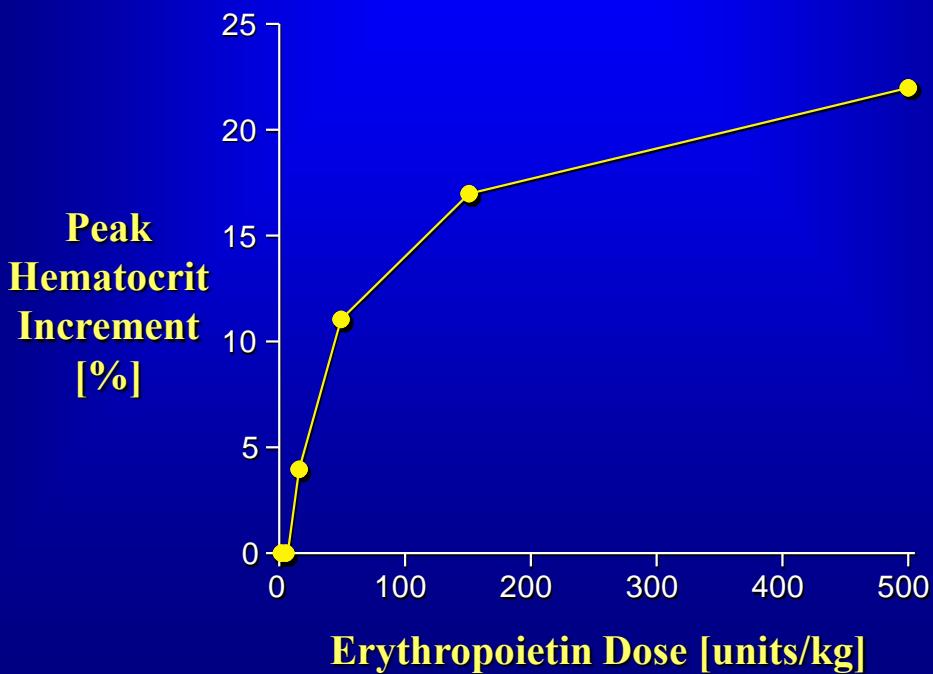

### Graded

- Continuous scale ( $\uparrow$ dose  $\rightarrow$   $\uparrow$ effect)
- Measured in a single biologic unit
- Relates dose to intensity of effect

### Quantal

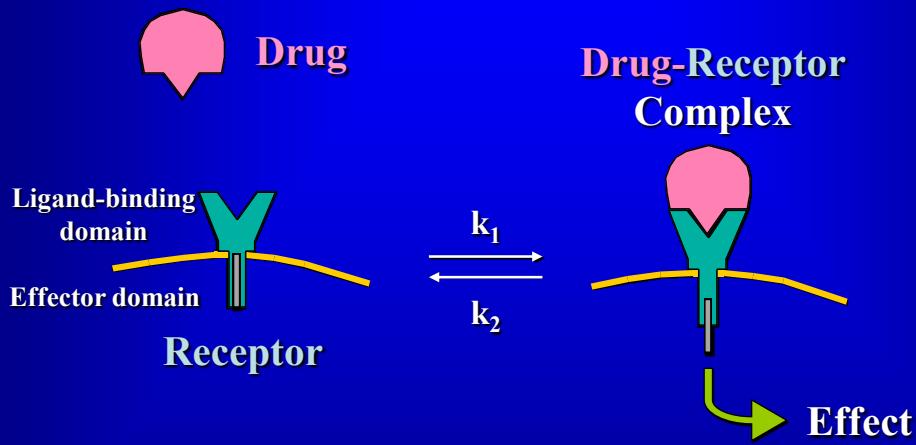

- All-or-none pharmacologic effect
- Population studies
- Relates dose to frequency of effect

## Erythropoietin and Anemia

Eschbach et al. NEJM 316:73-8, 1987

## Drug-Receptor Interactions

$$\text{Effect} = \frac{\text{Maximal effect} \cdot [\text{Drug}]}{K_D + [\text{Drug}]}$$
$$(K_D = k_2/k_1)$$

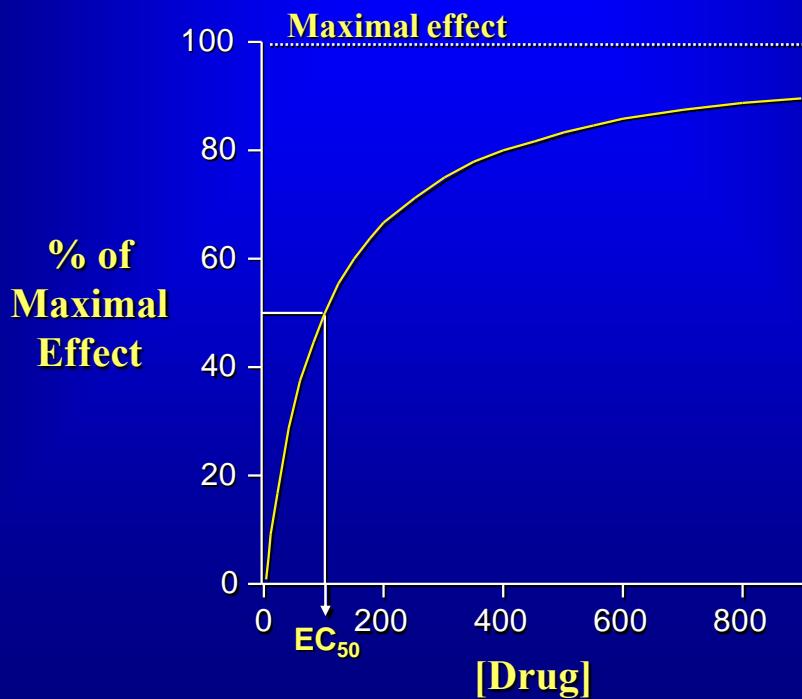

## Dose-Effect Relationship

$$\text{Effect} = \frac{\text{Maximal effect} \cdot [\text{Drug}]}{K_D + [\text{Drug}]}$$

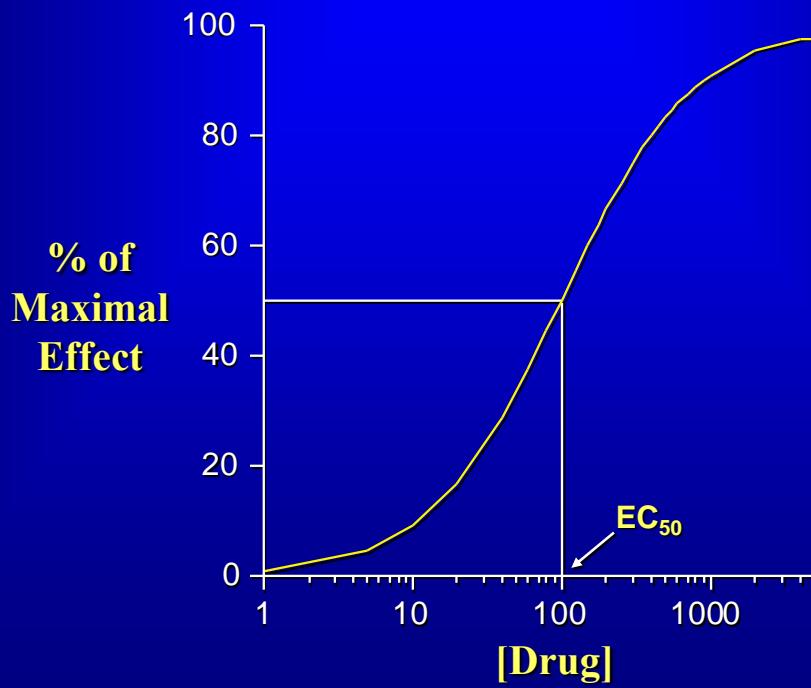

$$\text{Effect} = \text{Maximal effect} \cdot \frac{[\text{Drug}]}{K_D + [\text{Drug}]}$$

$$\text{Effect} = \text{Maximal effect} \quad \text{if } [\text{Drug}] \gg K_D$$

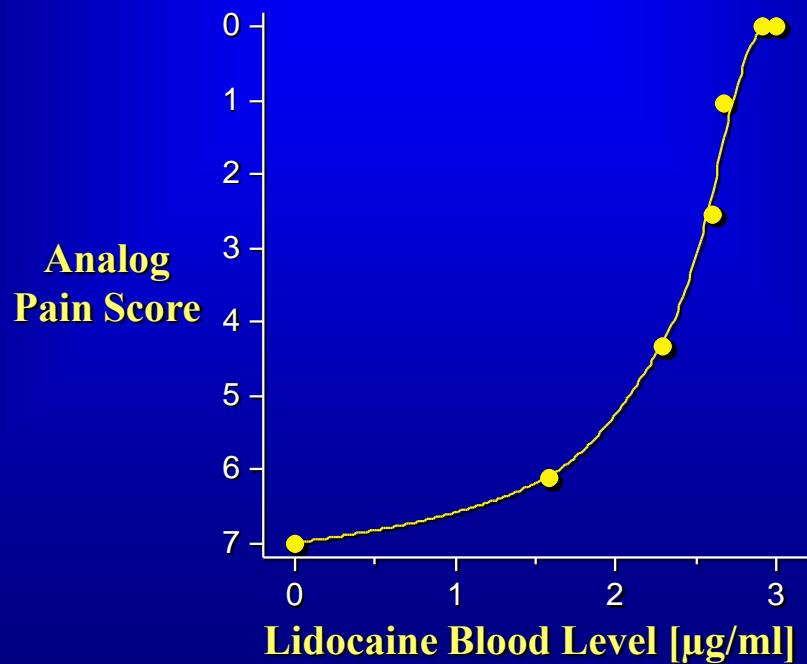

## Graded Dose-Effect Curve

## Log Dose-Effect Curve

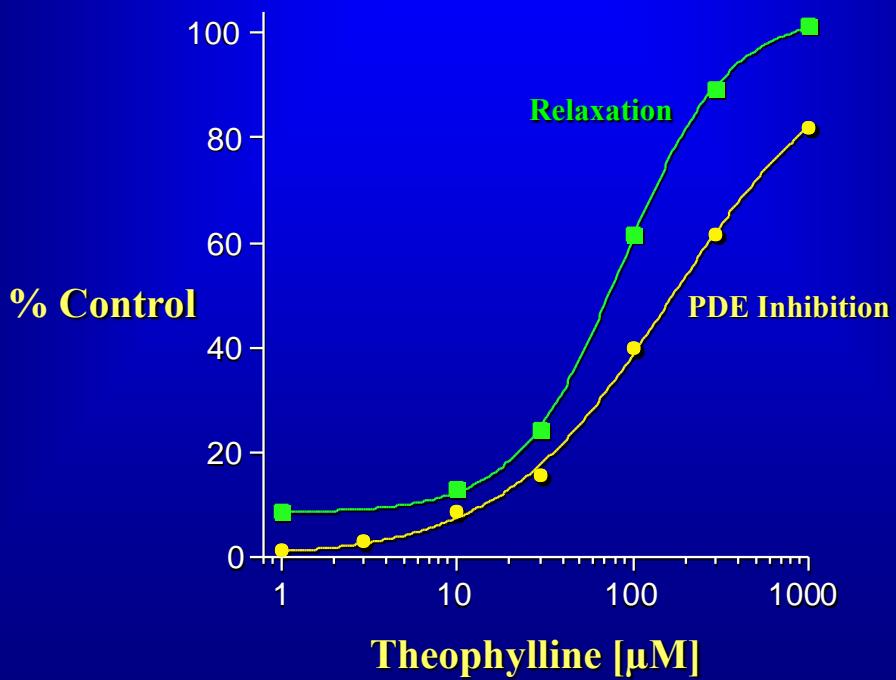

## Lidocaine Graded Dose-Effect

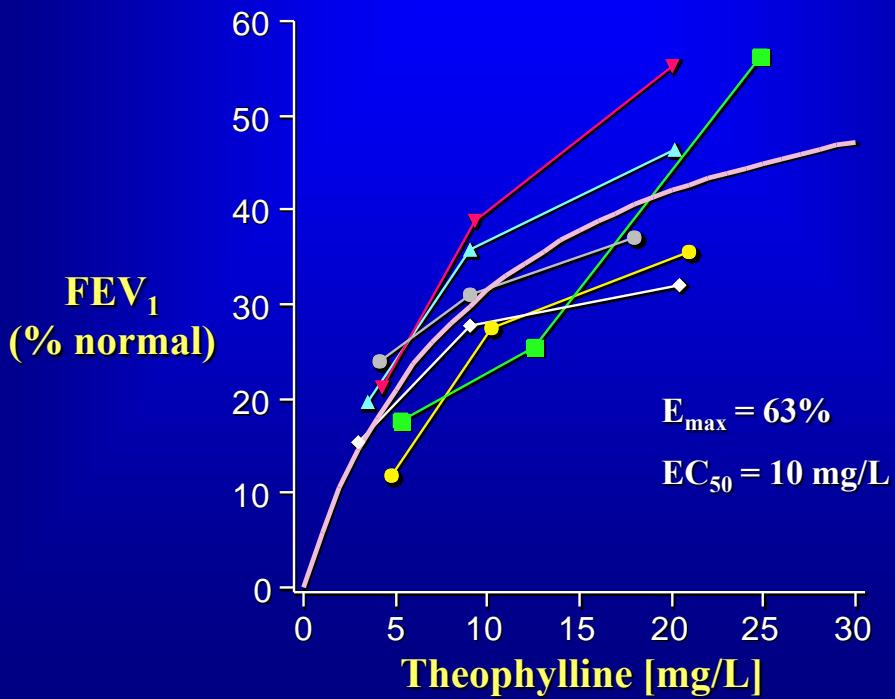

Ferrante et al. Anesth Analg 82:91-7, 1996

## Theophylline Dose-Effect

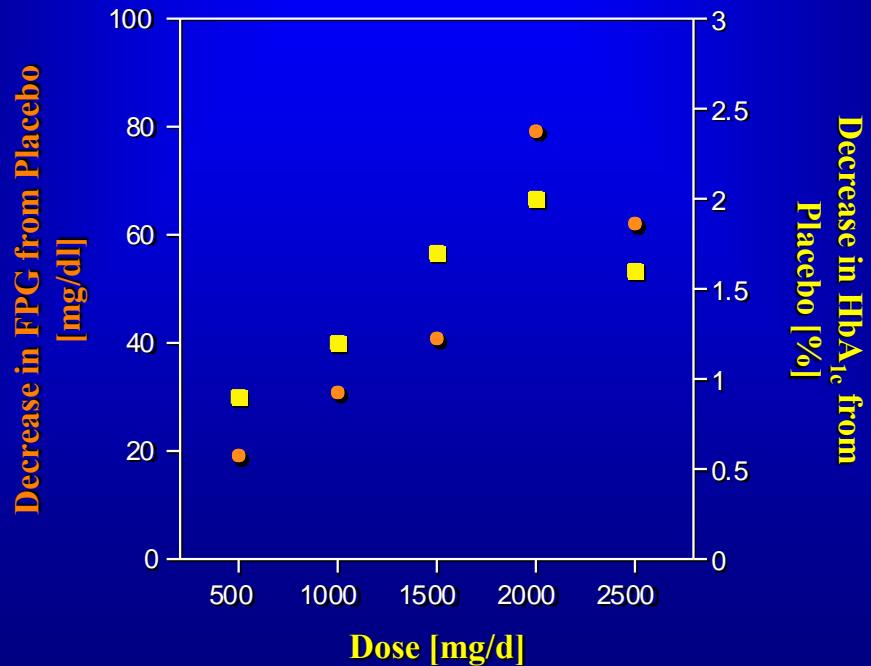

Rabe et al. Eur Respir J 8:637-42, 1995

## Theophylline Pharmacodynamics

Mitenko & Ogilvie NEJM 289:600-3, 1973

## Metformin Dose-Response

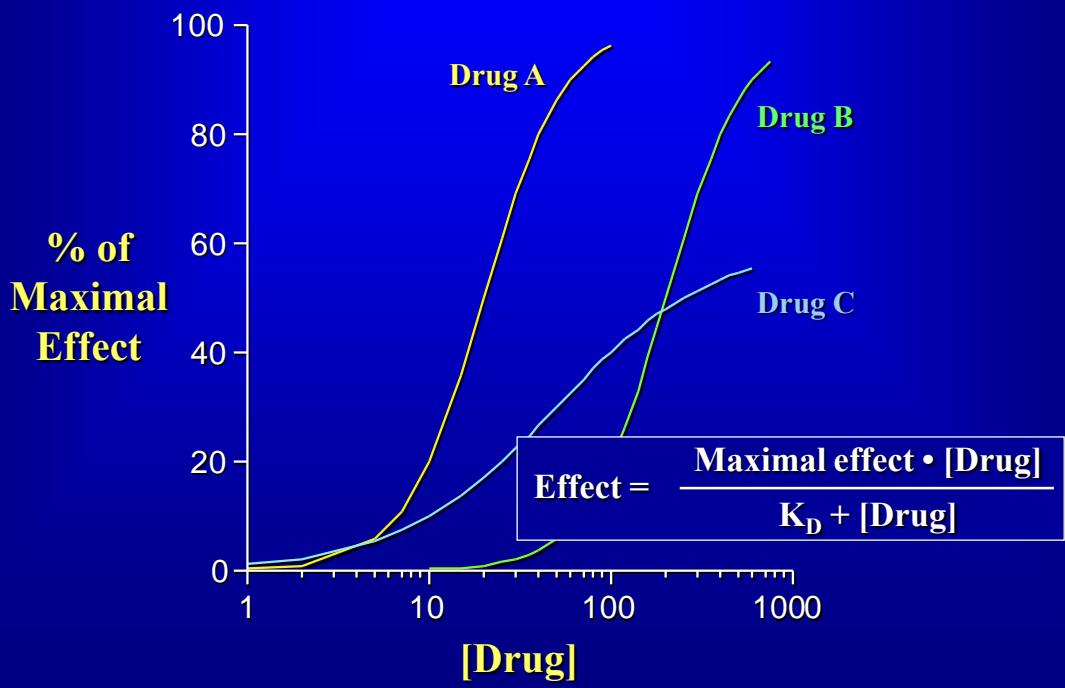

Garber et al. Am J Med 102:491-7, 1997

## Dose-Effect Parameters

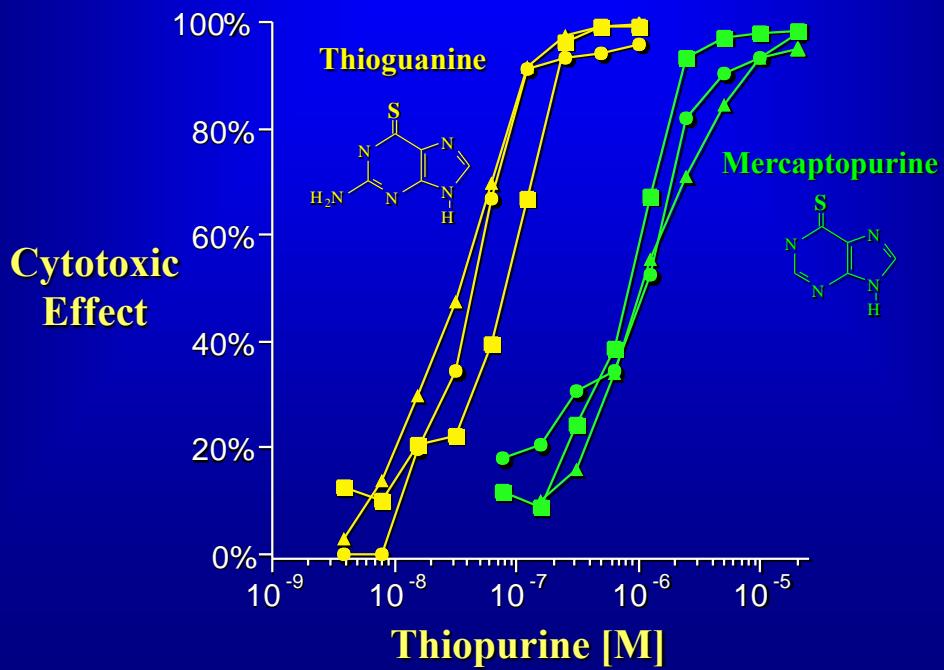

**POTENCY:** The sensitivity of an organ or tissue to the drug

**EFFICACY:** The maximum effect

## Comparing Dose-Effect Curves

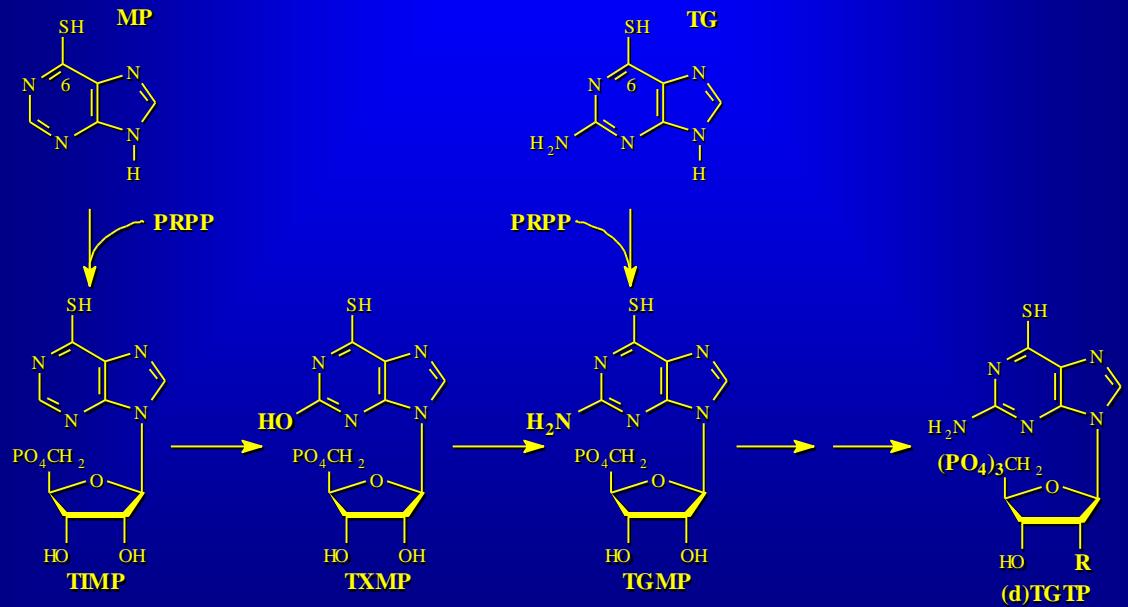

## Thiopurine Cytotoxicity

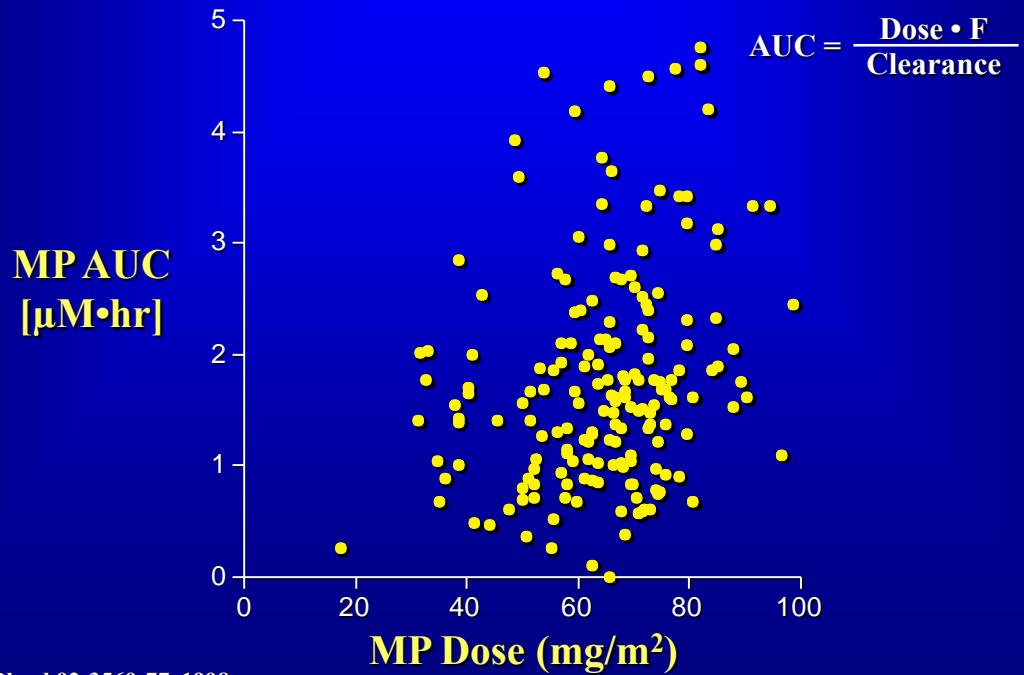

Adamson et al. Leukemia Res 18:805-10, 1994

## Thiopurine Metabolic Activation

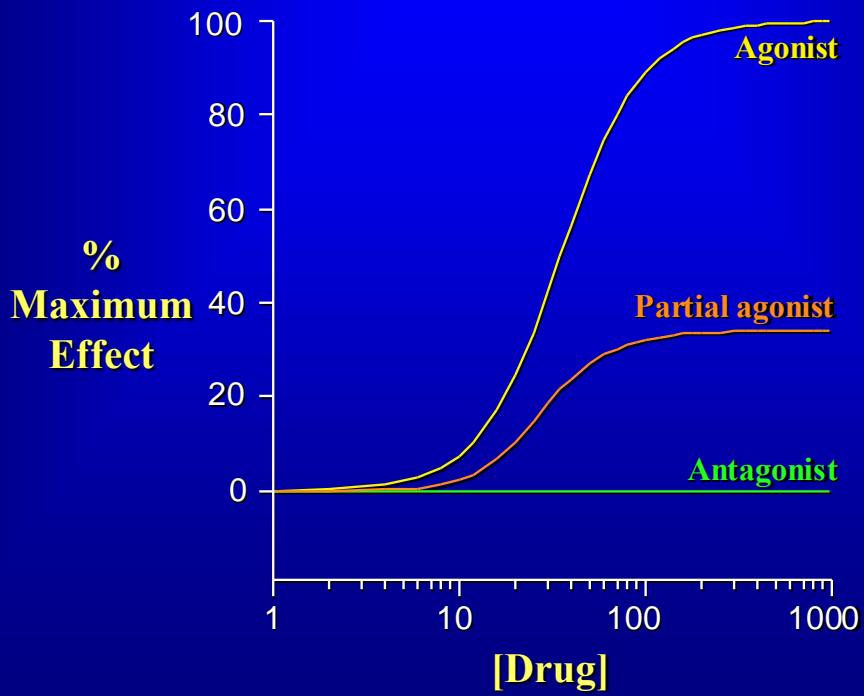

## Oral Mercaptopurine

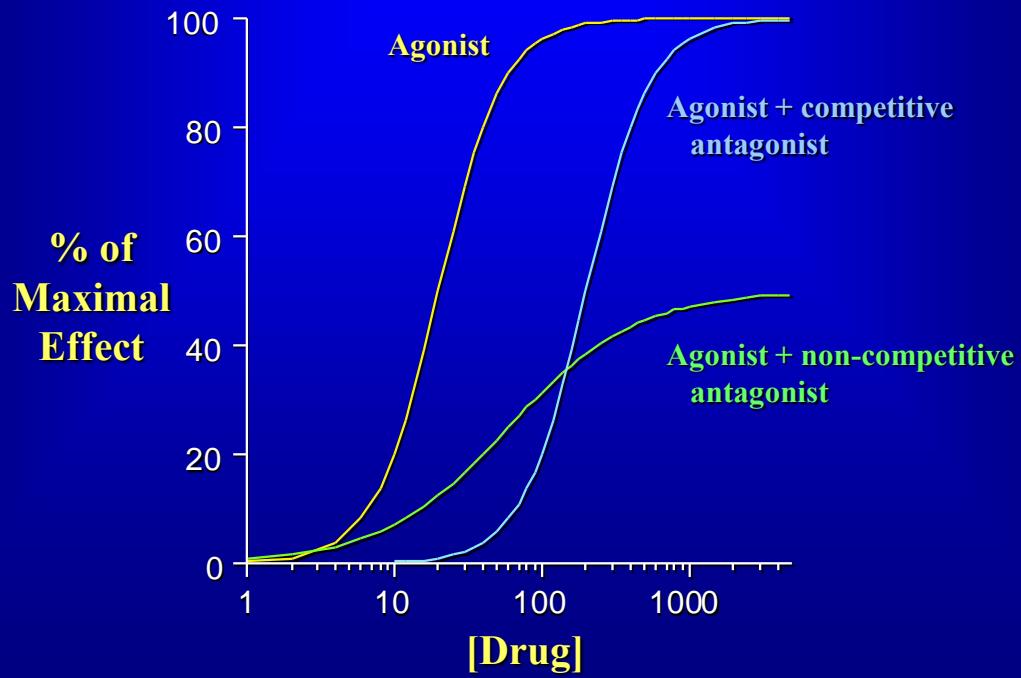

Balis et al. Blood 92:3569-77, 1998

## Receptor-Mediated Effects

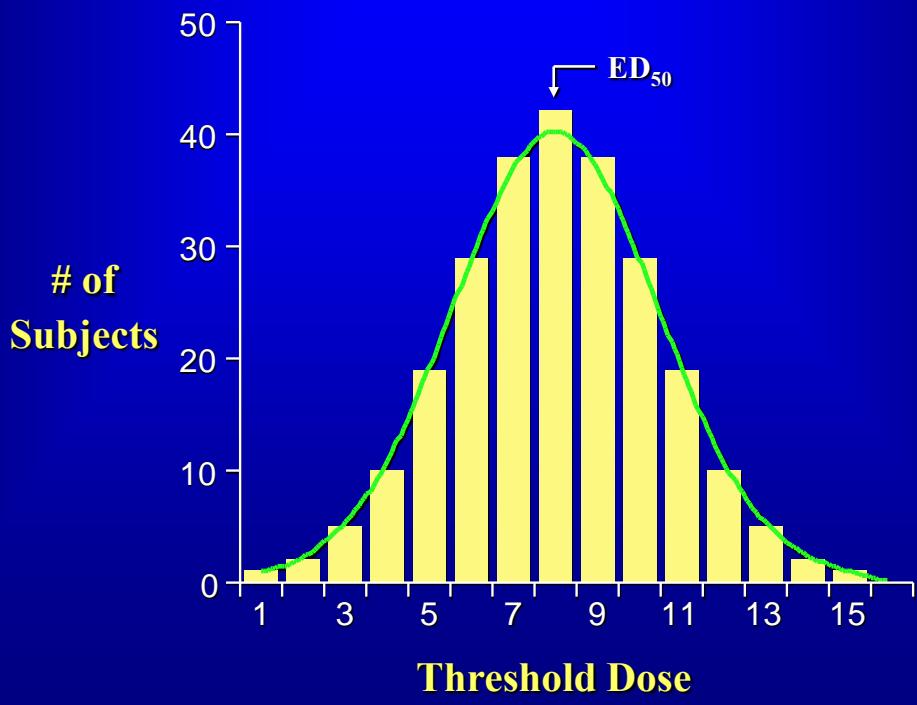

## Drug Interactions

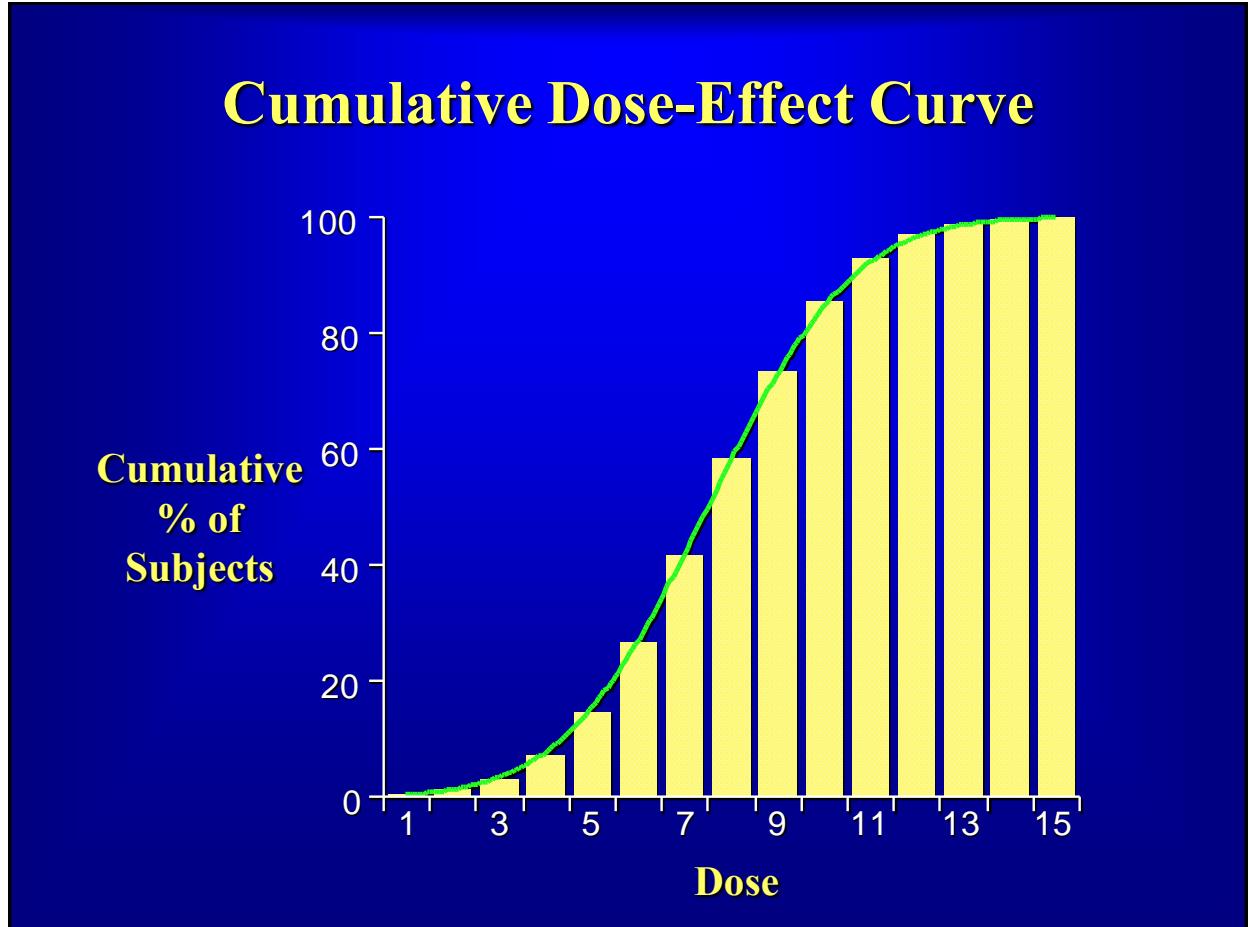

## **Graded Dose-Effect Analysis**

- Identify the therapeutic dose/concentration
- Define site of drug action (receptor)
- Classify effect produced by drug-receptor interaction (agonist, antagonist)
- Compare the relative potency and efficacy of drugs that produce the same effect
- Assess mechanism of drug interactions

## Quantal Dose-Effect Distribution

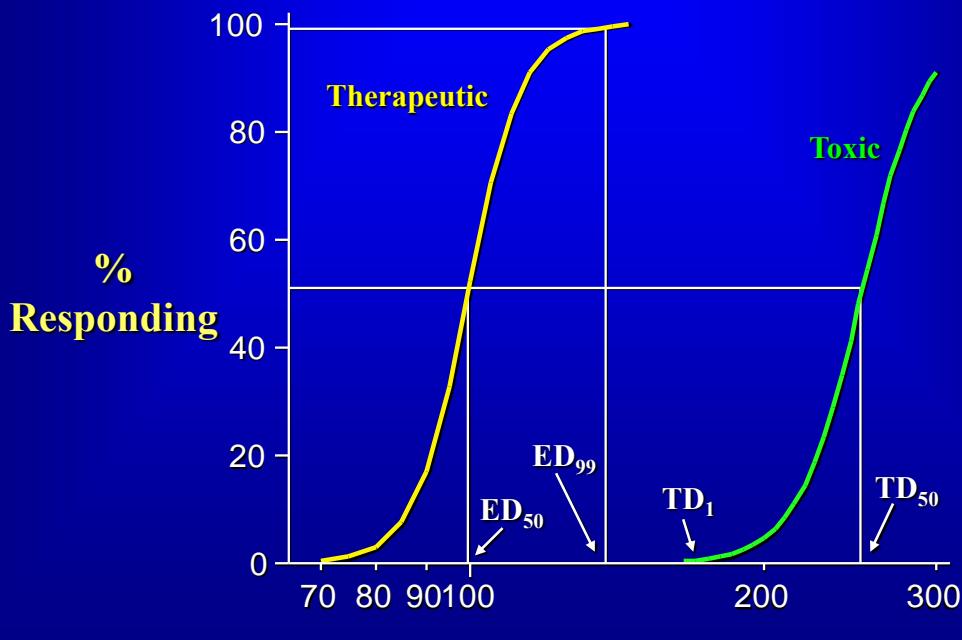

## Cumulative Dose-Effect Study

Dose Level	No. of Subjects	No. Responding	% Response
1	10	0	0
2	10	1	10
3	10	3	30
4	10	5	50
5	10	7	70
6	10	8	80
7	10	9	90
8	10	10	100

## Therapeutic and Toxic Effects

Indices

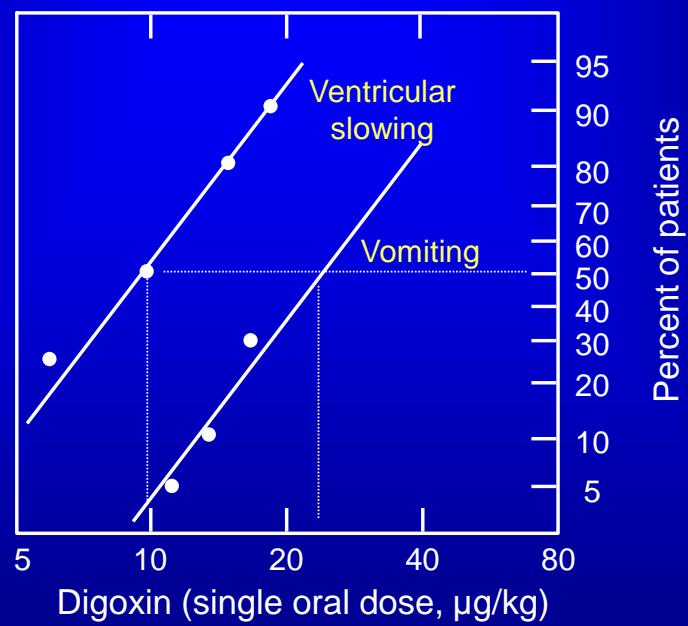

## Therapeutic Indices

$$\text{Therapeutic Ratio} = \frac{\text{TD}_{50}}{\text{ED}_{50}} = 2.5$$

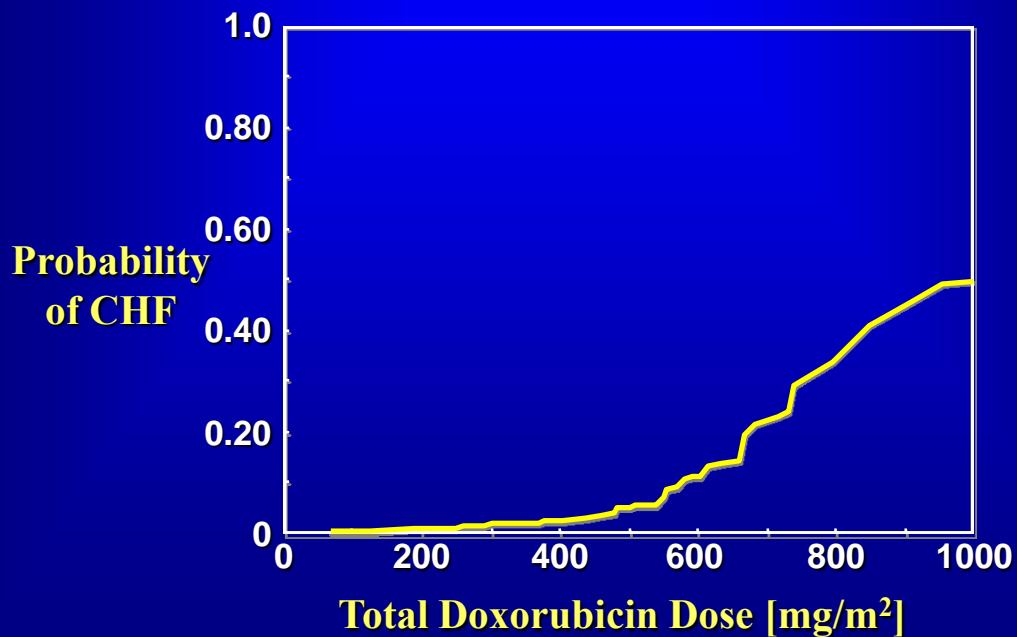

$$\text{Certain Safety Factor} = \frac{\text{TD}_1}{\text{ED}_{99}} = 1.3$$

$$\text{Standard Safety Margin} = \frac{\text{TD}_1 - \text{ED}_{99}}{\text{ED}_{99}} \times 100 = 31\%$$

## Digoxin Therapeutic Index

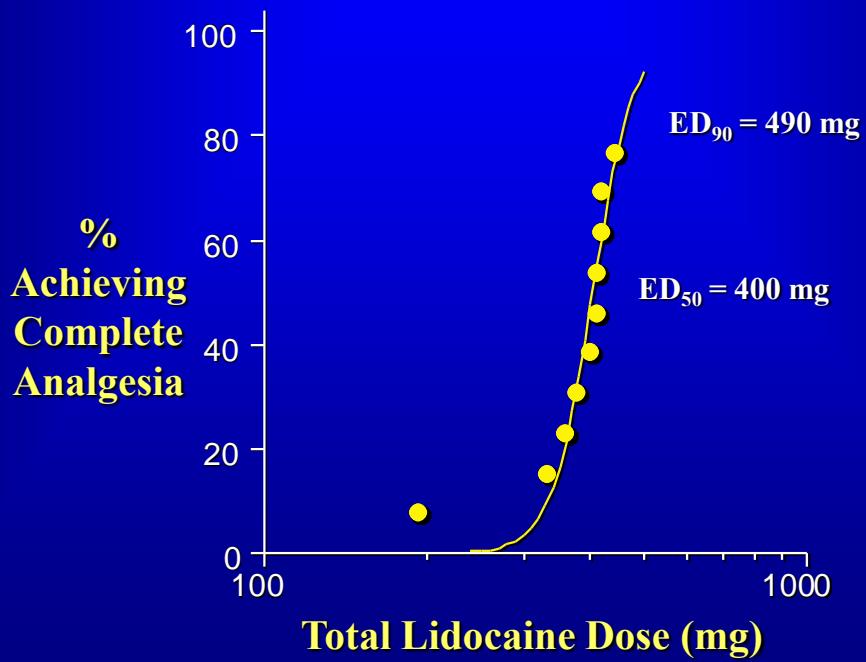

## Doxorubicin Cardiotoxicity

von Hoff et al. Ann Intern Med 91:710-7, 1979

## Lidocaine Quantal Dose-Effect

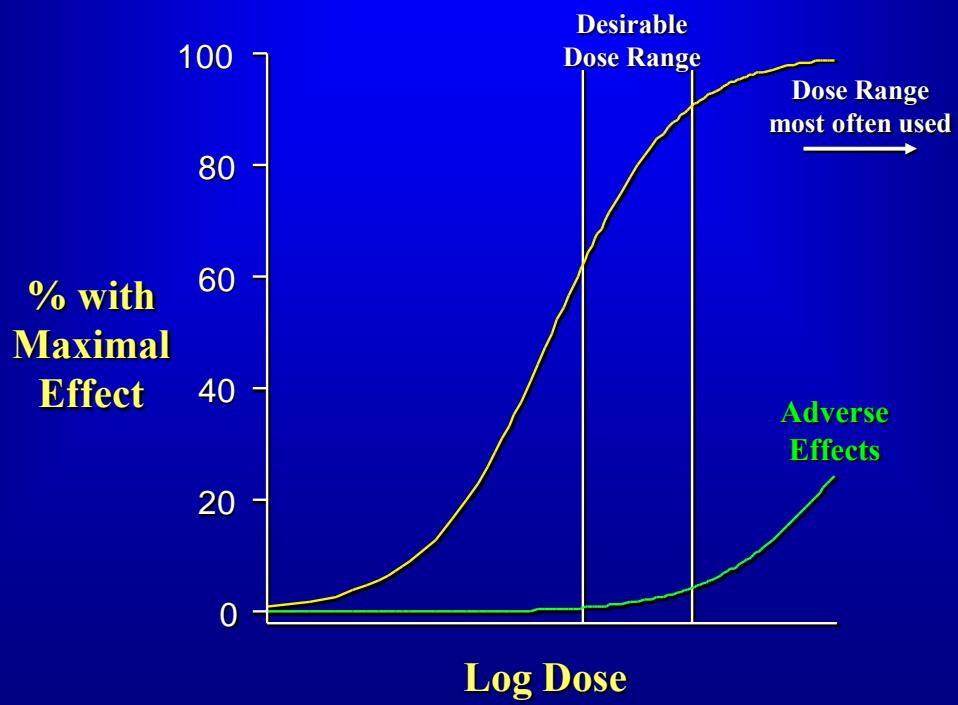

Ferrante et al. Anesth Analg 82:91-7, 1996

## Antihypertensive Dose-Effect

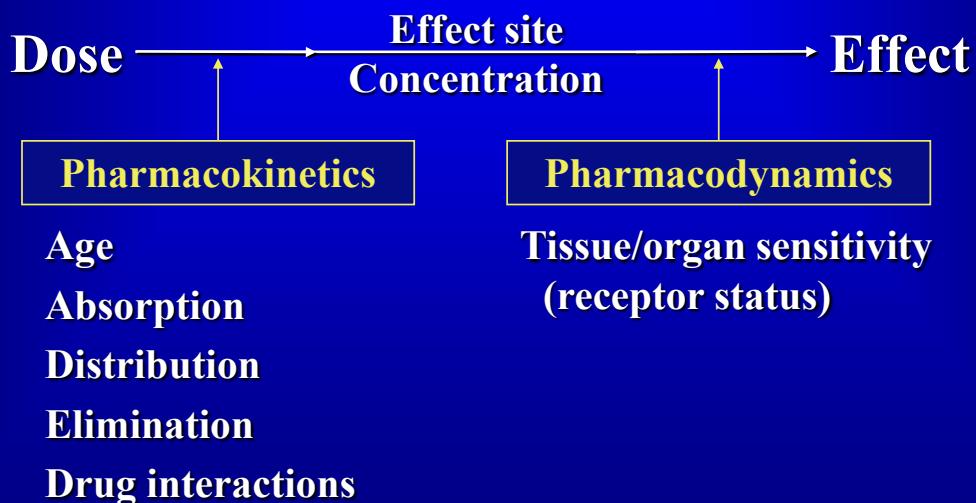

Drug	Dose Range [mg]		Lowest Effective Dose [mg]
	Early Studies	Present Dose	
Propranolol	160-5000	160-320	80
Atenolol	100-2000	50-100	25
Hydrochlorthiazide	50-400	25-50	12.5
Captopril	75-1000	50-150	37.5
Methyldopa	500-6000	500-3000	750

Johnston Pharmacol Ther 55:53-93, 1992

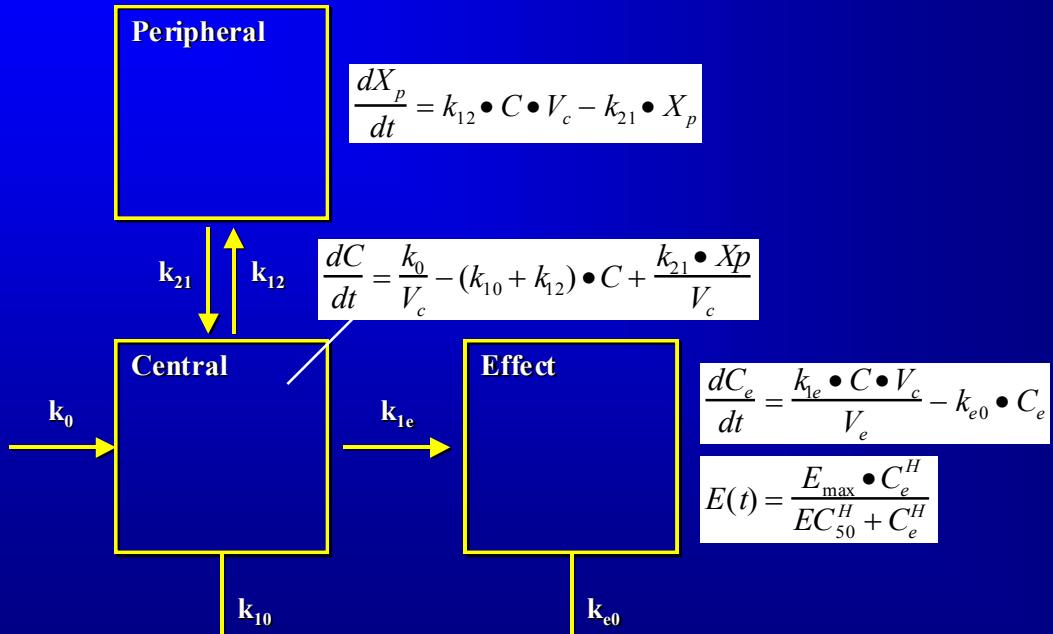

## Antihypertensive Drugs

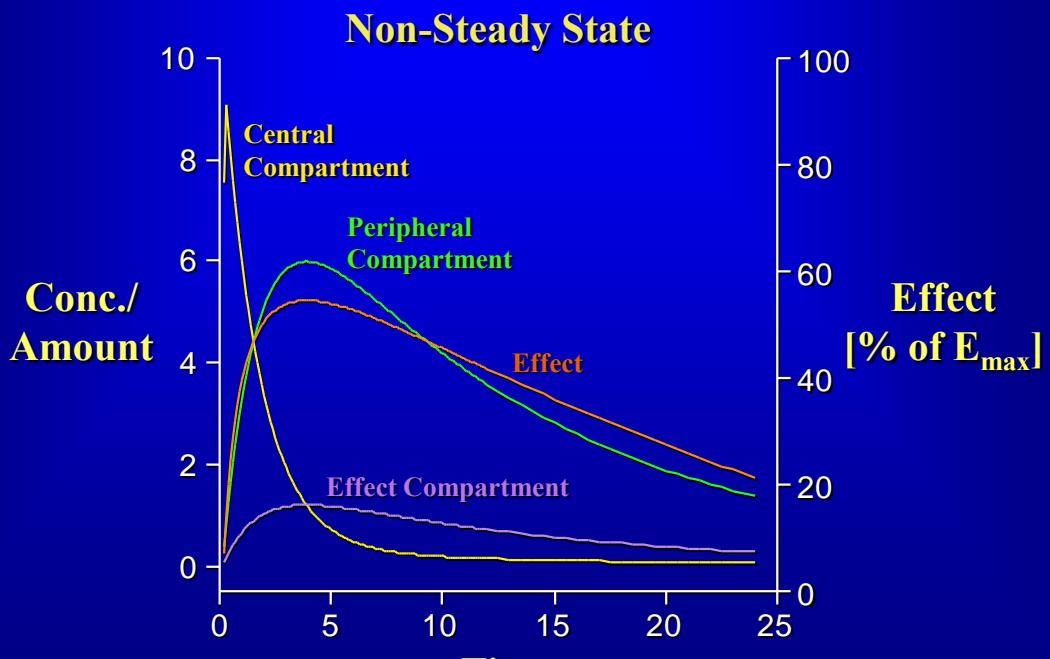

## Relating Dose to Effect *In Vivo*

## Effect Compartment (PK/PD Model)

## Concentration and Effect vs. Time

## Pharmacodynamic Models

- Fixed effect model

- Linear model

$$\text{Effect} = E_0 + S \cdot [\text{Drug}]$$

- Log-linear model

$$\text{Effect} = I + S \cdot \log([\text{Drug}])$$

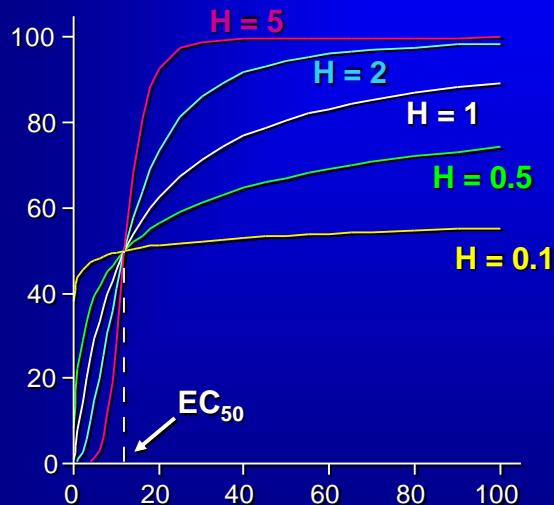

- $E_{\max}$  model

$$\text{Effect} = \frac{E_{\max} \cdot [\text{Drug}]^H}{EC_{50}^H + [\text{Drug}]^H}$$

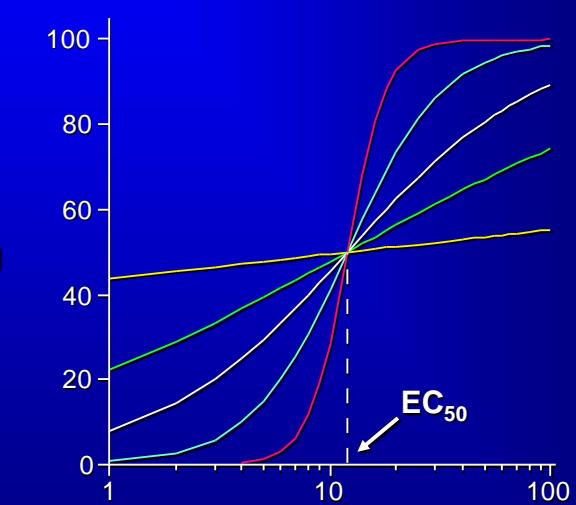

- Sigmoid  $E_{\max}$  model

## Sigmoid $E_{max}$ PD Model

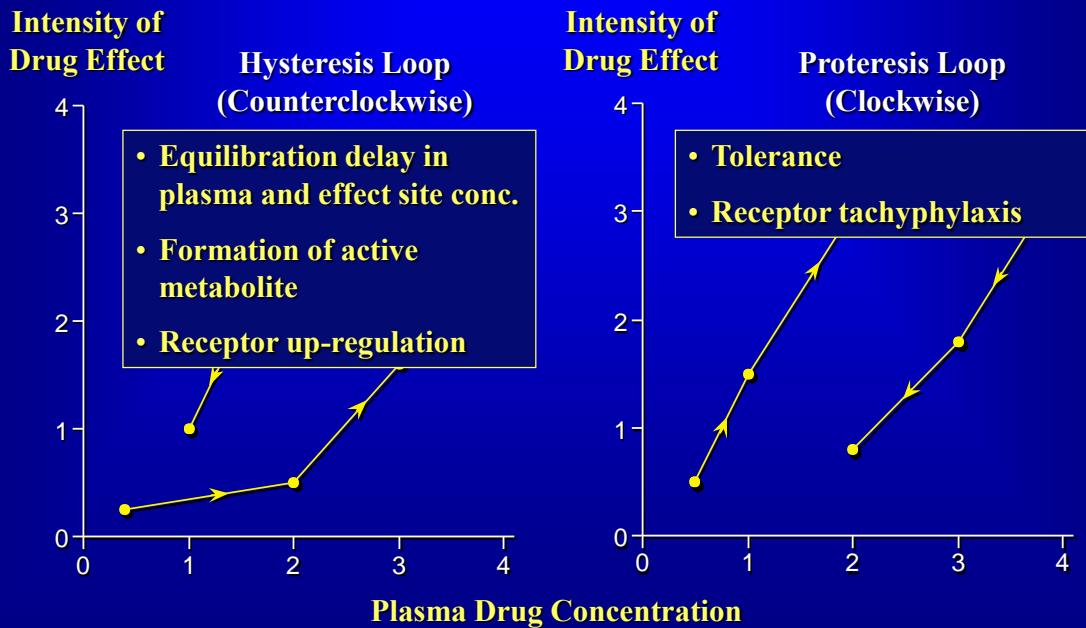

Effect (%)

Effect (%)

## Hysteresis and Proteresis Loops

## **Role of Dose-Effect Studies**

- **Drug development**
  - Site of action
  - Selection of dose and schedule
  - Potency, efficacy and safety
  - Drug interactions
- **Patient management**
  - Therapeutic drug monitoring
  - Risk-benefit (therapeutic indices)
